

Arithmetic Progression

Key Points

1. **Sequence:** A set of numbers arranged in some definite order and formed according to some rules is called a sequence.
2. **Arithmetic Progression:** A sequence in which the difference of each term from its succeeding term is constant throughout, is called an arithmetic sequence or arithmetic progression (A.P.).

In other words A.P. is sequence $a_1, a_2, a_3, \dots, a_n$ such that $a_2 - a_1 = a_3 - a_2 = a_4 - a_3 = \dots, a_n - a_{n-1} = d$ and so on.

3. **General Term:** If 'a' is the first term and 'd' is common difference in an A.P., then nth term (general term) is given by $a_n = a + (n - 1)d$.
4. **Sum of n Terms of an A.P. :** If 'a' is the first term and 'd' is the common difference of an A.P., then sum of first n terms is given by

$$S_n = \frac{n}{2} \{2a + (n-1)d\}$$

If 'a' is the first term & 'l' is the last/nth term of a finite A.P., then the sum is given by

$$S_n = \frac{n}{2} \{a + l\}$$

5. (i) If a_n is given, then common difference $d = a_n - a_{n-1}$
- (ii) If S_n is given, then nth term is given by $a_n = S_n - S_{n-1}$
- (iii) If a, b, c are in A.P., then $2b = a + c$
- (iv) If a sequence has n terms, its rth term from the end = $(n-r+1)$ th term from the beginning.
- (v) Difference of mth and nth term of an A.P. = $(m - n)d$.
